Bulk Delivery - System

- Pre-load each cart by account at warehouse. Carry only what you need, reducing fuel costs and weight. Stretch wrap in warehouse or use our containment curtain.
- Load straight truck by route delivery locations and unload accordingly.
- Use the cart to bring the product straight from the truck to the final location.
- Eliminate on street picking from costly bay trucks, keeps products out of the elements and reduces the amount of employee lifting and bending.
- Average 40-50 cases of product per cart instead of 10 per hand truck -- Reducing the number of trips by 400%.
- Use straight trucks instead of more expensive bay trucks. Have a lower initial cost and lower maintenance costs.
- Faster check-in time, reduces account service time by up to 50% and increases customer satisfaction.

Bulk Delivery - System

Minimize Risk of Accidents...

- Optional brake system locks both center wheels to prevent movement while loading/unloading. Carts stay in place while being transported or unattended. Brakes can be set from both sides and both ends for convenience.
- Ergonomic round handle is easier on driver's hands.
- Heavy duty understructure reduces risk of injuries and spills due to caster failure.
- Widest wheelbase in the industry. Makes the cart more stable.
- One piece formed deck eliminates "peeling" that can cause product damage and driver injury.
- Exclusive cover system contains product even with one side open. Helps protect product from shifting during transportation.

Maximize Return on your Investment...

- Handles are reinforced and heat treated reducing the risk of bending. Welded design won't loosen over time like riveted designs.
- One piece deck eliminates peeling of the top skin, broken welds and prevents waving and warping inherent in welded deck designs.
- Caster plates are full width and full perimeter welded reducing damage caused to carts by twisting during
 use.
- Heavy duty support structure for center wheels reduces risk of failure compared to caster designs.
- Full length stringers are integrated into deck providing additional strength and support.
- Corner pockets are fully welded preventing them from breaking out.
- Industry exclusive 3 Year Warranty

Tropicana Sprinter Delivery System

You've Seen the Parts - Here's How it Works!

Our cart system goes into a custom Mercedes Sprinter van.

The cargo area of the van is upfitted to use a fiberglass liner kit and refrigeration unit.

Tropicana/Pepsico is purchasing 171 of these vans this year – all will use our system. Our brace system goes in next, these attach to the floor, ceiling and sidewall of the van.

There is a forward, mid and aft brace – left side and right side.

Our carts are custom fit to match the contour of the van. Each van has 4 carts, 2 forward and 2 aft – sized to fit over the wheel well. The shelves are spaced to fit the different sizes of juice they deliver.

The aft brace shelf folds down and pivots to be used as a staging area for picking orders. The middle shelf on each cart hinges up out of the way when empty to improve interior space.

Each cart is hitch pinned to the braces – this is the only form of securement, no tie down straps are needed.

The carts are loaded in the warehouse and rolled into the van each day for delivery.

We manufacture the highest quality delivery products, guaranteed! We're so confident, we offer a no obligation demo program. Order our products and try them risk free, for 30 days. If you don't agree that they are simply the best products available, we will take them back! Contact us today for more details.
